

sE X1 D|Kick Drum Condenser Microphone

KICK DRUM CONDENSER MICROPHONE

The **sE X1 D** is the first dedicated instrument mic in the X1 series. It has been designed specifically to record sound sources producing very high SPL's such as kick drum with incredible accuracy and a natural sounding full frequency response. The sE X1 D includes a custom designed and hand crafted Titanium-sputtered capsule, a world's first at anywhere near its price point, which delivers exceptional performance in the handling of super-fast percussive transients.

And like all registered sE Electronics products it comes with a 3 year Zero Downtime Free Replacement Warranty.

APPLICATIONS

Ideal for kick drum, drums, percussion, bass

FEATURES

Titanium Capsule: Custom designed and hand crafted Titanium-sputtered capsule. The much stiffer Titanium sputtering means that the capsule membrane returns to its resting state incredibly quickly after responding to transients compared to normal condensers. This in turn translates into incredible percussive accuracy.

Cardioid Polar Pattern: Delivers great on-axis response, with off-axis rejection, which is needed when recording a drum as part of a kit or a percussion section where it may be adjacent to the other instruments.

Integrated shock protection: The mic has a built in rubber capsule mount for isolation, dispensing with the need for a bulky external shock mount.

Stand adapter: X1D includes a side-mounted stand adapter for easily fitting your mic to a mic stand.

sE X1 D | Kick Drum Condenser Microphone

140dB SPL dynamic range: Drums in particular can be loud and create very fast transient sound waves. The sE X1D design enables this full dynamic range to be captured with ease without introducing sonic artifacts that could be caused if using inferior quality components.

80Hz Bass Cut: May be applied to decrease the level of proximity effect, typical in cardioid pattern microphones when they are placed very close to a sound source, or to isolate from low frequency rumble coming from other sources such as kick-pedal to floor.

-10/-20 dB Pad: Useful when recording very loud signals the -10/-20 dB Pad will reduce the output level from the microphone ensuring a high quality signal is delivered to the receiving ancillary equipment in the recording chain.

Three-year, zero-downtime free replacement limited warranty:

sE Electronics promises that should your product develop a fault* within three years of registration it will be replaced free of charge with a new replacement unit.

BOX CONTENTS

- sE X1 D Kick Drum Condenser Microphone
- Soft protective pouch
