

# X1 A

## BEST-IN-CLASS PERFORMANCE

There's a new entry point to **the critically-acclaimed X1 Series**, and it's breaking the performance barrier (again) for affordable microphones.

When introduced in 2011, the X1 condenser mic brought a new level of quality to its price point, competing easily with microphones costing multiple times as much. But that didn't stop sE from trying to outdo itself again, and **the new X1 A** is the result of these efforts.

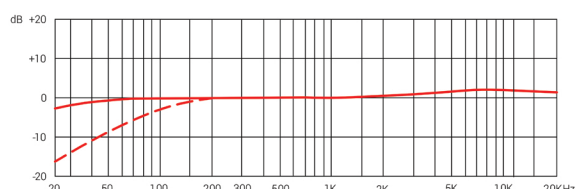

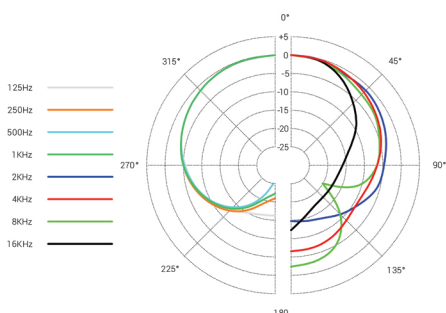

**A new capsule, new low-noise electronics, integrated windscreen, all-metal construction, and better overall performance than any other mic in its class** make the X1 A the perfect "all rounder" that means your first microphone is now one that you'll never want to replace.

## COMPLETELY NEW ACOUSTIC DESIGN

The X1 A's **newly-developed condenser capsule design** is a work of art, delivering best-in-class sonic performance on any source with incredible speed, accuracy, and well-balanced frequency response.

The **integrated windscreen** eliminates the need for an external pop filter, and provides an extra layer of safety and security for the all-important capsule. The electronics have also undergone a complete overhaul, and exhibit **better specifications and sound** than any other microphone in its class.

Unlike the cost-cutting construction of some other mics, this superb all-metal chassis provides efficient rejection of any electrical interference and noise - and the gold-plated XLR connector & premium finish ensures great performance & looks for years to come.

## VERSATILITY FOR ANY SOURCE

The **-20 dB pad switch** provides extended dynamic range, enabling a wide range of applications and close-mic techniques for even the loudest instruments (horns, guitars, kick drums & more), and the **100 Hz low-cut switch** helps eliminate low-frequency rumble or footfall noise, and compensates for excessive bass with close-mic techniques (proximity effect).

The X1 A also comes complete with a rock-solid, newly-designed mic clip and a mic stand adapter that fits both USA and European mic threads.
